KPP agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of KPP, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental disorders (e.g. raidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, parkinson's disease or epilepsy), autoimmune/inflammatory disorders (e.g. AIDS, acquired immune deficiency syndrome, allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, kinase; phosphatase; KPP; cell proliferative disorder; hepatitis; atherosclerosis; cirrhosis; haemoglobinuria; polycythaemia vera; cancer; psoriasis; thromobocytopaemia; developmental disorder; Reiter's syndrome; renal tubular acidosis; anaemia; mental retardation; Alzheimer's disease; neurological disorder; Parkinson's disease; epilepsy; glomerulonephritis; autoimmune disorder; Inflammatory disorder; AIDS; Goodpasture's syndrome; acquired immune deficiency syndrome; immunosuppressive; Crohn's disease; nootropic; transgenic; dermatitis; multiple sclerosis; diabetes mallitus; allergy; gout; Grave's disease; Hashimoto's thyroiditis; bowel syndrome; osteoporosis; rheumatoid arthritis; Sjogren's syndrome; ophthalmological; gene therapy; asthma; anticonvulsant; uropathic; pancreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kable AE, Chien D, Wilson AD, Swarnakar A, Gorvad AE;

The present sequence is minimary process. By the present sequence is minimary to the process. The present sequence is minimary to the process. The present sequence is minimary to the sequence of immune system disorders nearly proliferative disorders. Examples of immune system disorders and call proliferative disorders. Examples of immune system disorders include acquired immune deficiency syndrome (AIDS), severe combined immunodeficiency disease (SCID), adult crespiratory distress syndrome, allergies, amyloidosis, anamia, asthma, atherosclerosis, Crohn's disease, allergies, amyloidosis, anamia, asthma, catherosis, myasthenia gravis, myocardial or pericardial inflammation, osteoporosis, myocardial or pericardial inflammation, osteoporosis, pancreatitis, psoriasis, Reiter's syndrome, coffeoarthritis, Sjogren's syndrome, soleroderma, systemic coffeoarthritis, Sjogren's syndrome, soleroderma, systemic coffeoarthritis, Siogren's syndrome, soleroderma, systemic retardation and other developmental disorders including mood, anxiety, and schizophrenic disorders, seasonal affective disorders such as akathesia, amnesia, caratonia, dyskinesia, developmental disorders include e.g. renal tubular acidosis, Duchenne and Electrive disorders include e.g. renal tubular acidosis, Duchenne and Becker muscular dystrophy, gonadal dyspenseis, hypothyroidsiam; cell colliferative disorders include e.g. actinic keratosis, arteriosclerosis, arteriosclerosis, hursitis, cirrhosis, hepatitis, psoriasis and cancer including adenocarcinoma, leukaemia. The polypoptide and polyburoleocider or arallysing achome of a risking or a relither marking and polymoleocidide.
                                                                                                          , Ding L, Elliott VS, Gandhi AR, Griffin JA;

polypeptide. The inventions to a mean tytosine phosphatase to a medicament for modulating the activity of human tyrosine phosphatase in a disease such as obesity, diabetes, a central nervous system (CNS) disorder, chronic obstructive pulmonary disease, cardiovascular disorder or cancer. The invention is useful for treating a human tyrosine phosphatase of dysfunction related disease, preferably the above mentioned diseases. The invention is useful for treating the above mentioned diseases. The invention is useful for treating the above mentioned discases. The invention is useful for treating the above mentioned discases. The croke, Alzheimer's disease, and Huntington's disease, and the cardiovascular disorder is selected from congestive heart failure and myocardial infarction. The molecules of the invention are useful in diagnostic assays for detecting diseases and abnormalities or autations in the polynucleotide coding the polypeptide of the invention. The present amino acid sequence represents the human tyrosine phosphatase protein #1 of the invention. This sequence is encoded by the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            62 VLENNCNVIAMITREIECGVIKCYSYWPISLKEPLEFEHFSVFLETFHVTQYFTVRVFQI 121

Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function; (2) a method for the diagnosis of cancer; (3) a method for inhibiting the growth of a cancer cell; (4) methods of screening for targets of a cancer associated phosphatase, where the targets are associated with signal transduction in cancer cells; (5) a compound (C) for the treatment of a tumour; (6) a composition for the treatment of a tumour comprising a pharmaceutical carrier and (C); (7) methods for treating a tumour; and (8) a method for visualising a tumour in a patient. A cancer associated phosphatase of the present invention has cytostatic, imminosuppressive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       purepuacas of the present invention has Cylouscutt, immunication, antidatebric, neuroprotective, antinheumatic, antiarthritic, antiparteriosclerotic, antinheumatic, antiarthritic, antiparteriosclerotic, antinheumatory, vulnerary, antiparteriosclerotic, antinheumatory, vulnerary, synaecological and antiangiogenic activities. The cancer associated phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or diagnosing and treating cancer, e.g. pancreas, lung, ovarian, liver or colon cancer. The polypeptides and nucleic acids may also be used for treating hyperproliferative diseases, such as autoimmune disease, diabetes mellitus, multiple sclerosis, rheumatoid arthritis, psoriasis, atherosclerosis, infilammation, scarring, endometriosis or angiogenesis, determining the effectiveness of drugs, determining patient prognosis, or as targets for screening pharmaceutical agents that inhibit the growth or metastasis of tumour cells. The present

                                                                                                                                                                                                                                                                                                    markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence was used in the exemplification of the invention.
                                                                                                                                                                             61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wang J;

                        The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and polypeptide (II)

sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymoclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is conspiculty of (II) or to treat disease states involving (II). (II) is conspiculty of (II) and its binding partners are useful in medical imaging colspicates in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders of supplement protein expression or biological activity. The polypeptide and polymoclecide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at

The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The polypeptide of the invention demonstrates cardiovascular, antiarterisoslerotic, protectic, protectic, protectic, protectic, protectic, protectic, artiallargic, antiallargic, antidabetic, antianthritic, uropathic, aparcointestinal, neuroprotective, osteopathic, antiarthritic, uropathic, ophthalmological, antiarthritic, uropathic, ophthalmological, antiparthritic, uropathic, ophthalmological, antiparthritic, uropathic, antiparabitic, antiparterial, virucide, protectorulsant, hepatotropic, antiparatic, antiparatic, cantibacterial, virucide, protectical antiparabitic, antiparatic, antiparatic, contibacterial, virucide, protectical and fungicide activities. The kinase and phosphatase (KPP) polymoucleotides, polypeptides, agonists and antagonists may be useful for diagnosing, treating or preventing contrological disorders and viral, bacterial, fungal, parasitic, coll protection or helminthic infections. Purthermore, the molecules of the invention may be useful for creating transgence and auman collegence is that of a human collegence in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62 VLENNCNVIAMITREIECGVIKCYSYWPISLKEPLEFEHFSVFLETFHVTQYFTVRVFQI 121

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The present sequence represents rat PTP10. The above proteins, other than ALK -7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with aboremal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and tymphomal, which modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's carine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polymucleotides encoding the proteins can be used as probes to identify and clone related sequences, to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the

dispoyee cells, given in the specification. The proteins are identified by selecting a bair protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins encoded by members of an adipocyte colls, and proteins are designated SID members of an adipocyte colls, and proteins are designated SID comparing a polypeptide in the adipocyte cells, a recombinant host cell expressing at least one of the interacting polypeptides of the complex, selecting a modulating compound in adipocyte cells, a sID (RTM) polypeptide comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a sID (RTM) polypucletide comprising any of the 738 nucleotide sequences given in the specification (including its fragment or variant), a vector comprising the SID (RTM) polymucleotide, a recombinant host cell comprising the Vector, a protein chip comprising the polypeptides and a recomplex, polypeptides, polymucleotides and compounds are useful for the complex, polypeptides, polymucleotides and compounds are useful for the complex of the fata, listed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The polynucleotides are useful as probes or primers. The complex is particularly useful for identifying selected interacting domains (SID (RTM)) for screening thugs that modulate the protein interaction, thus exhibiting the therapeutic effect. The present sequence represents a SID (prey) protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ONRDKNRYRDILPYDSTRVPLGKNKDYINASYIRIVNHEEEYFYIATQGPLPETIEDFWQ 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New complex between two interacting proteins in adipocyte cells, useful for identifying selected interacting domains that modulate protein interactions, or for preventing or treating metabolic disorders such as obesity or diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a complex between two interacting proteins in
                                                                                                                                                                    Human, prey, adipocyte, SID, selected interacting domain, anorectic, antidiabetic, protein-protein interaction; diabetes, yeast 2-hybrid assay; metabolic disorder, obesity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes human protein kinase/protein phosphatases. It is expected that the protein kinase/protein phosphatase gene participates in signal transduction in cells. The protein kinase/protein phosphatase polypeptides and polynucleotides are useful for developing diagnostics and treatment agents for human and animal diseases. The protein kinase/protein phosphatase polypeptides are useful as target molecules in designing novel drugs. The protein kinase/protein phosphatase polypeptides are useful as a source of probes and primers, which may be used to isolate homologous sequences. The present sequence represents a human protein, which is used in the course of the invention

-- SUBUNIT: Binds PLEKHA1 and PLEKHA2 through its first PDZ domain (By similarity). Interacts with TRIPS of TRRESFG (Fas receptor) through its second PDZ domain. Interacts with the C-terminal SVP motif of NGTR through its second and fourth PDZ domains. Interacts with the LIM domain of PDIIMH through its second and fourth PDZ domains.
-- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-- TISSUE SPECIFICITY: Expressed predominantly in kidney and, to a lesser extent, in lung, heart, brain and testis.
-- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                     to

Note=May be due to a competing donnor splice site;
TISSUE SPECIFICITY: Present in most tissues with the exception of
the liver and skeletal muscle. Most abundant in lung, kidney and
fetal brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tyrosine + phosphate.
-!- SUBDANT: Interacts with TRIP6 and TNRRSF6 (Fas receptor) through its second PDZ domain. Interacts with the C-terminal SVP motif of NGFR through its third PDZ domain. Interacts with the LIM domain
                                                                                                                                                                                                                                                                                                        GUANINE NUCLEOTIDE EXCHANGE FACTOR RA-GEP-2.

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expression of cytoskeletal-associated protein tyrosine phosphatase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tyrosine + phosphate.
--- SUBCELLULAR LOCATION: Cytoplasmic.
--- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamins.
--- SIMILARITY: Contains 1 FREM domain.
--- SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE-2022.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          d
